

## ORIGIN

### 1) Importowanie plików (77, 110, 150, 170, 210, 250, 285K)

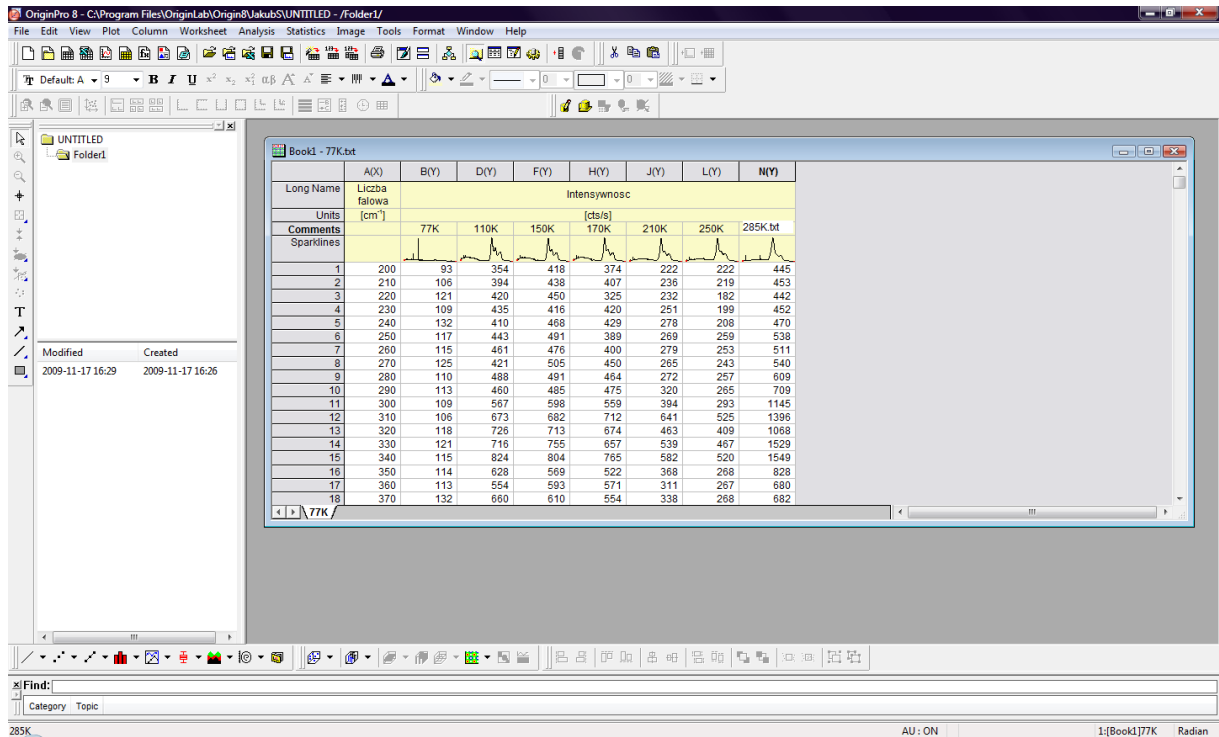

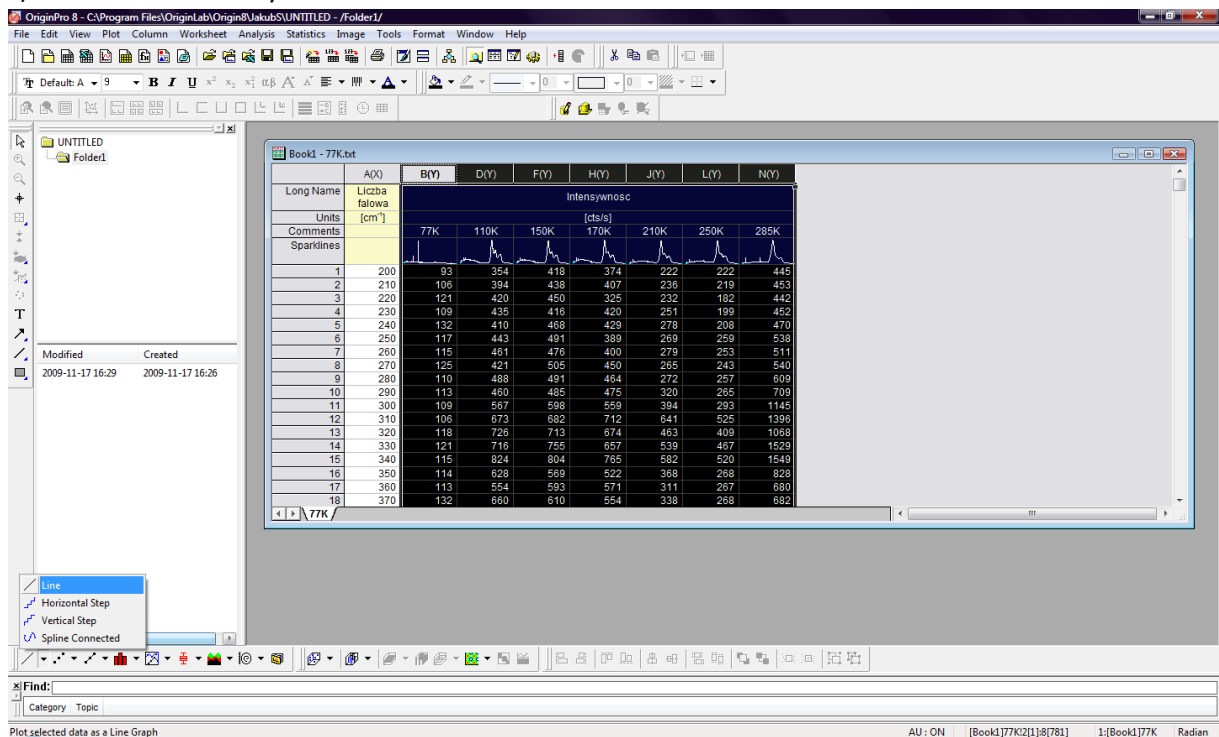

## 2) Zaznaczenie i usuniecie zbędnych kolum

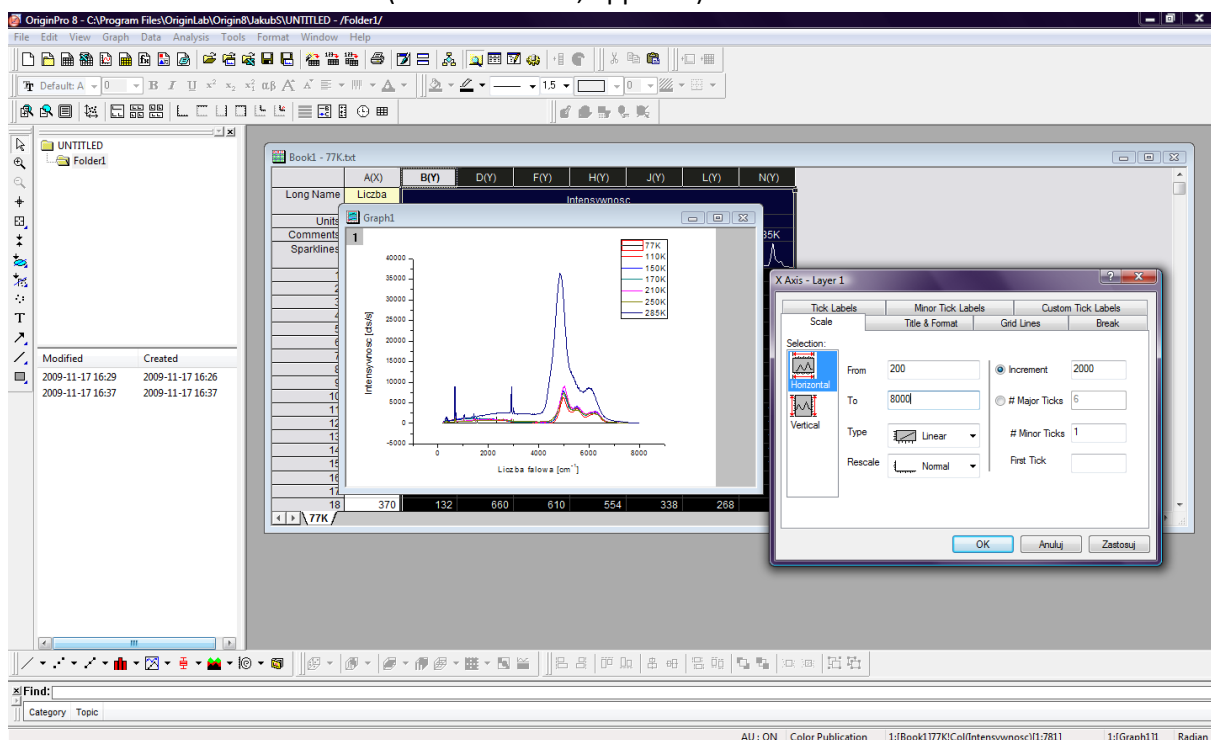

### 3) Zmiana nazwy (usuniecie .txt) – Comments, dodanie Long Name i Units

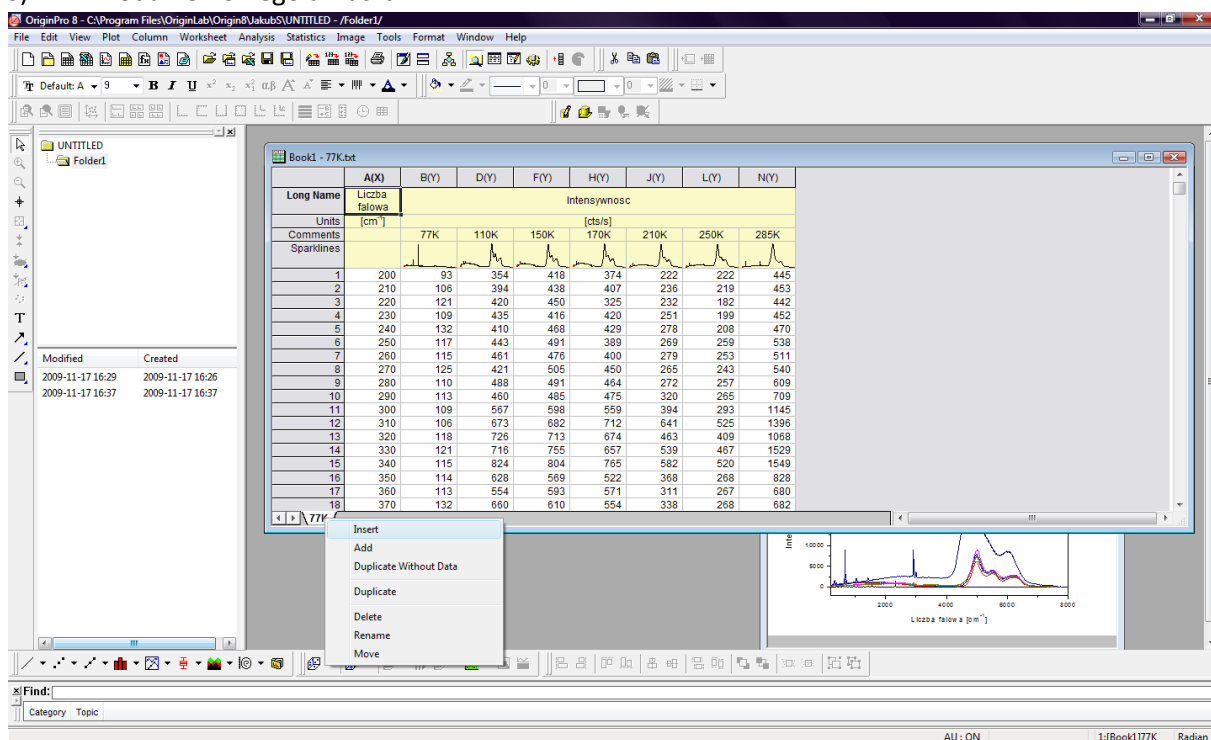

### 4) Wstawianie wykresu

- 5) Skalowanie osi X <200:8000> increment: 1500, Y <-2000:40000> increment: 5000;  
Grid Lines – vertical I horizontal (additional lines, opposite)

- 6) Dodanie nowego arkusza

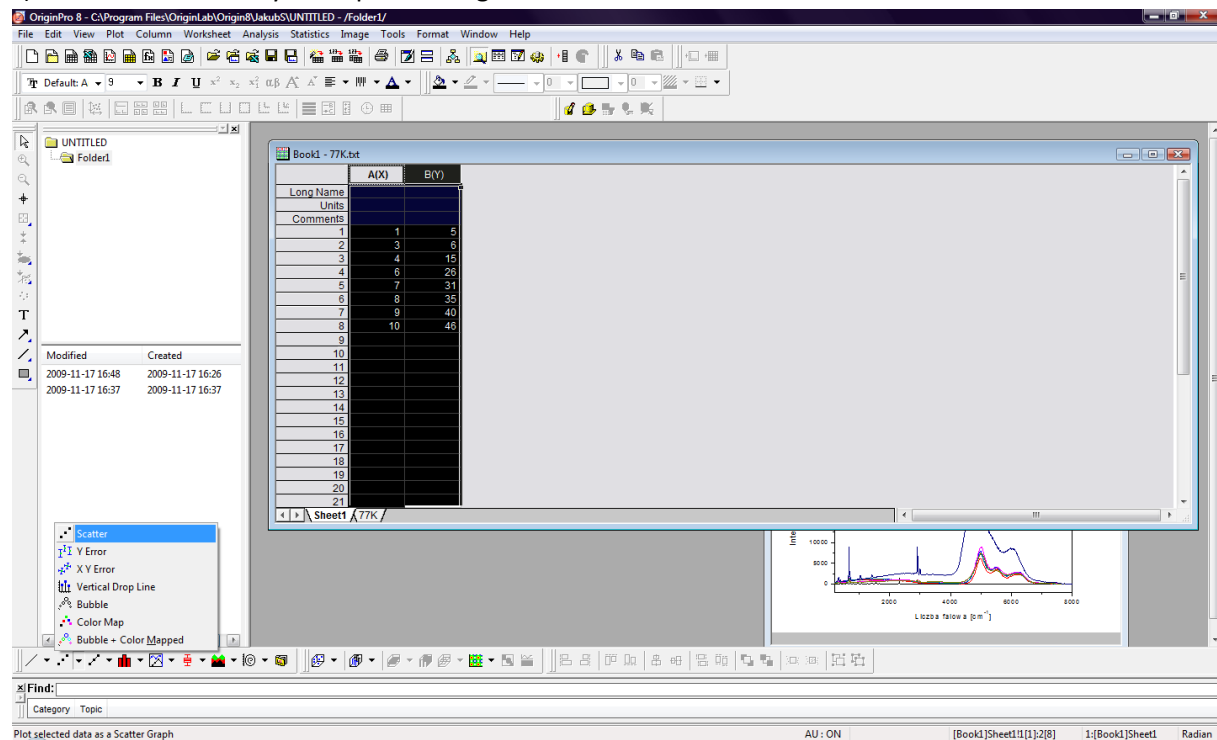

## 7) Wstawianie wartosci w kolumnie X od 1 do 10 i Y

The image consists of two screenshots of the OriginPro 8.0 software interface, demonstrating how to set values in a column.

**Top Screenshot:** The 'Book1 - 77K.txt' window is open. A right-click context menu is displayed over the column list. The 'Set Column Values...' option is highlighted. The column list shows columns A(1) through A(21). The 'Long Name' column is selected. The 'Set Column Values...' option is highlighted in the context menu.

**Bottom Screenshot:** The 'Set Values - [Book1]Sheet1[Col(A)]' dialog box is open. The 'Formula' field contains the text 'wcol(1) Col(A) F(x)'. The 'Row (i) From' is set to 1 and 'To' is set to 10. The 'Col(A)' field is empty. The 'Recalculate' button is highlighted. The 'Set Values' dialog box is open, showing the 'Formula' field with the text 'wcol(1) Col(A) F(x)'. The 'Row (i) From' is set to 1 and 'To' is set to 10. The 'Col(A)' field is empty. The 'Recalculate' button is highlighted.

8) Wstawianie wykresu punktowego

9) Fit linear
